Lehmäkerä länsiseinä ja  
laakso

Tuulen pieksämä aaltoileva lumi

Länsiseinän lumi aaltoilee runsaasti.  
Laaksossa tilanne on hieman parempi, mutta  
kokonaisuutena lumitilanne on kohtalainen.

With this application, snow information in the Pallas area has been brought into digital form. The area is delimited by various segments of the fell and those segments appear on the map. The color of a segment changes according to its snow condition. Ski school employees can use the app to record their observations of the type of snow in the area. Customers can visit the website to view the latest information.
